

# The Property Developer's Website Launch Checklist

# Are You Launching a Leaky Bucket?

You are about to spend thousands driving traffic to your new development's website.

But if the digital infrastructure isn't ready, you are burning your marketing budget on window-shoppers.

# Sub-3 Second Mobile Speed

High-net-worth buyers are viewing your site on their phones.

If your heavy 3D renders and videos take 10 seconds to load, they will bounce before they even see the building.

# Frictionless Floor Plan Access

Serious investors don't want to hunt for information.

Make sure floor plans, amenities, and project timelines are intuitively structured and accessible in under 3 clicks.

# Smart Lead Capture

A generic "Name & Email" form creates extra work for your team.

Your forms must capture specific buyer intent, investment budgets, and timelines to filter out unqualified leads.

# Direct CRM Integration

Where do your leads go when they hit submit?

If they sit in a generic, unmonitored email inbox, they go cold. Enquiries must route instantly to your sales team's CRM.

## Missing a Few Boxes?

General web agencies build pretty websites, but they forget the sales infrastructure.

At Jotuned Innovations, this checklist is our baseline. We build platforms designed to sell real estate.

# Launching a Project This Quarter?

Bookmark this checklist for your next team meeting.
